RyniXsoft Data Analysis Internship Week 3 - Process

Date: 20-03-2026

Sales Performance Analysis Report

Analysis Aim:

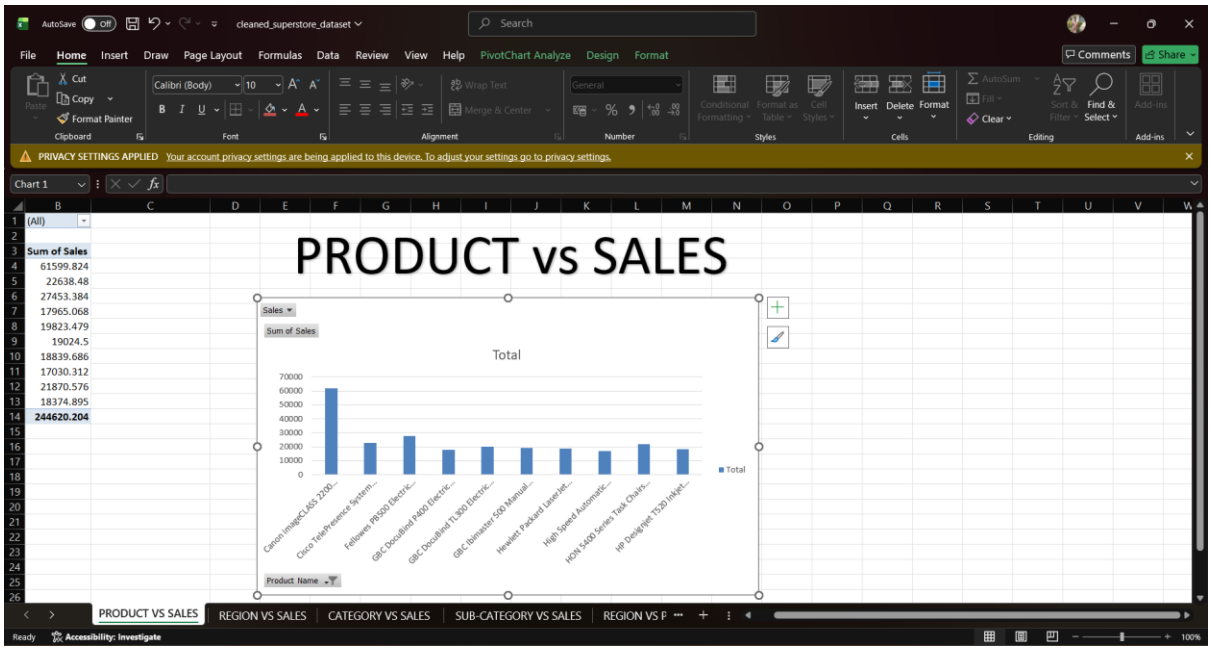
How does sales performance vary across products, regions, and categories, and what insights can be derived to improve business growth?

1. Product vs Sales

Chart Type: Bar Chart
Fields Used: Product Name (Axis), Sales (Values)

Observation:
A few products have significantly higher sales compared to others, while most products have moderate sales.

Business Insight:
High-performing products should be prioritized for marketing, production, and inventory management to maximize revenue.

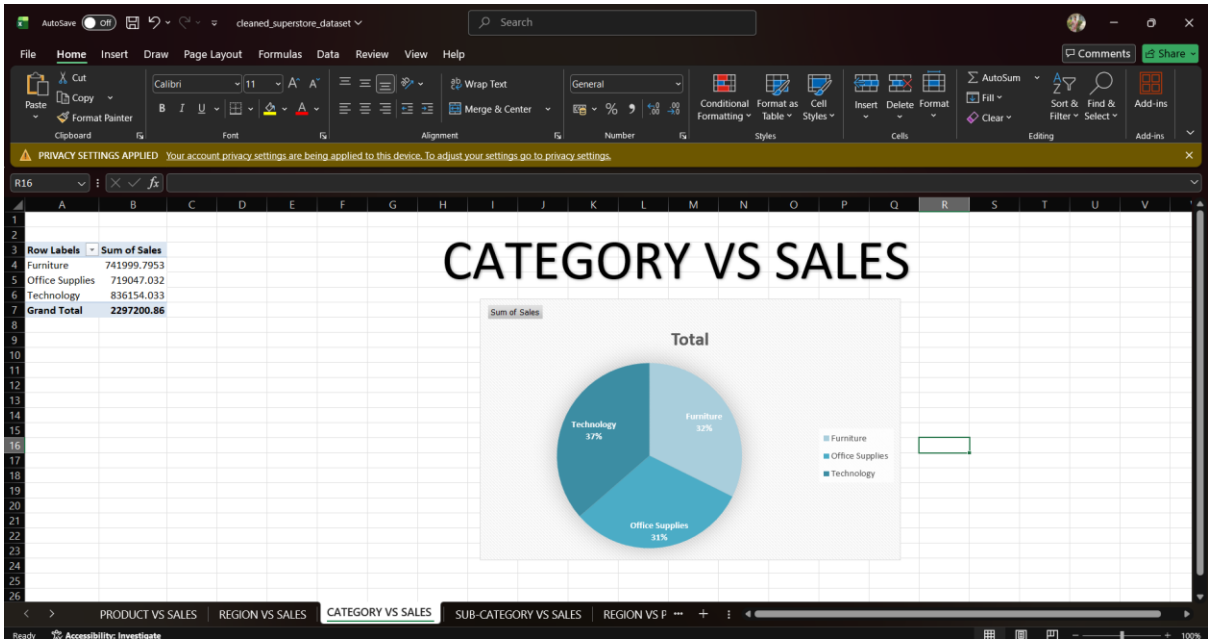


2. Category vs Sales

Chart Type: Pie Chart
Fields Used: Category (Axis), Sales (Values)

Observation:
One category contributes a larger portion of total sales compared to the others.

Business Insight:
The company should focus on the top-performing category to drive revenue growth.

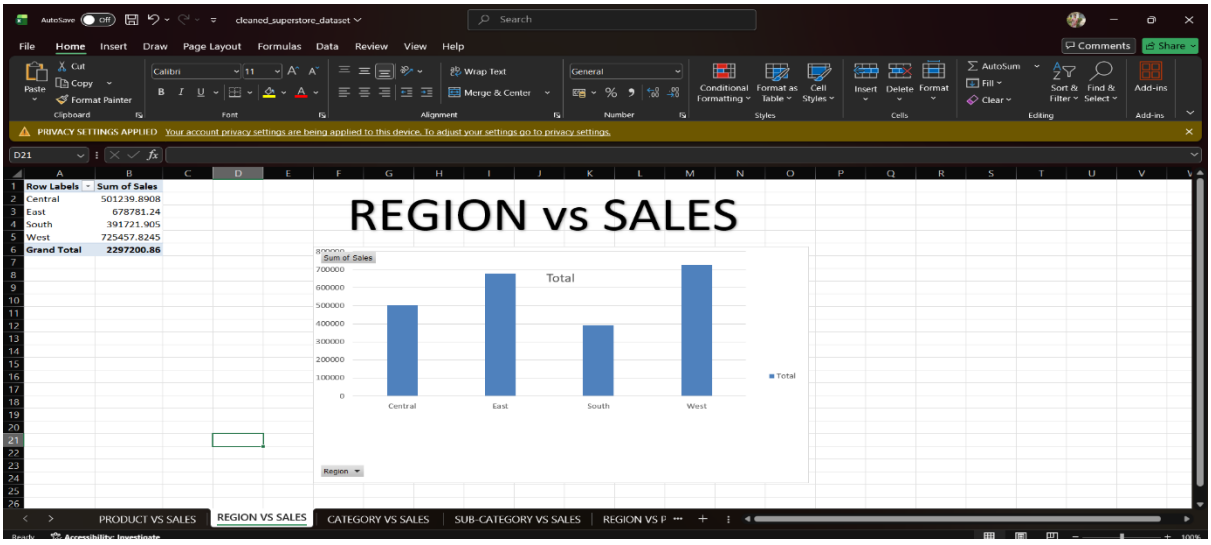


3. Region vs Sales

Chart Type: Column Chart
Fields Used: Region (Axis), Sales (Values)

Observation:
Some regions generate higher sales, while others show comparatively lower performance.

Business Insight:
High-performing regions indicate strong market demand, while low-performing regions need improved marketing strategies

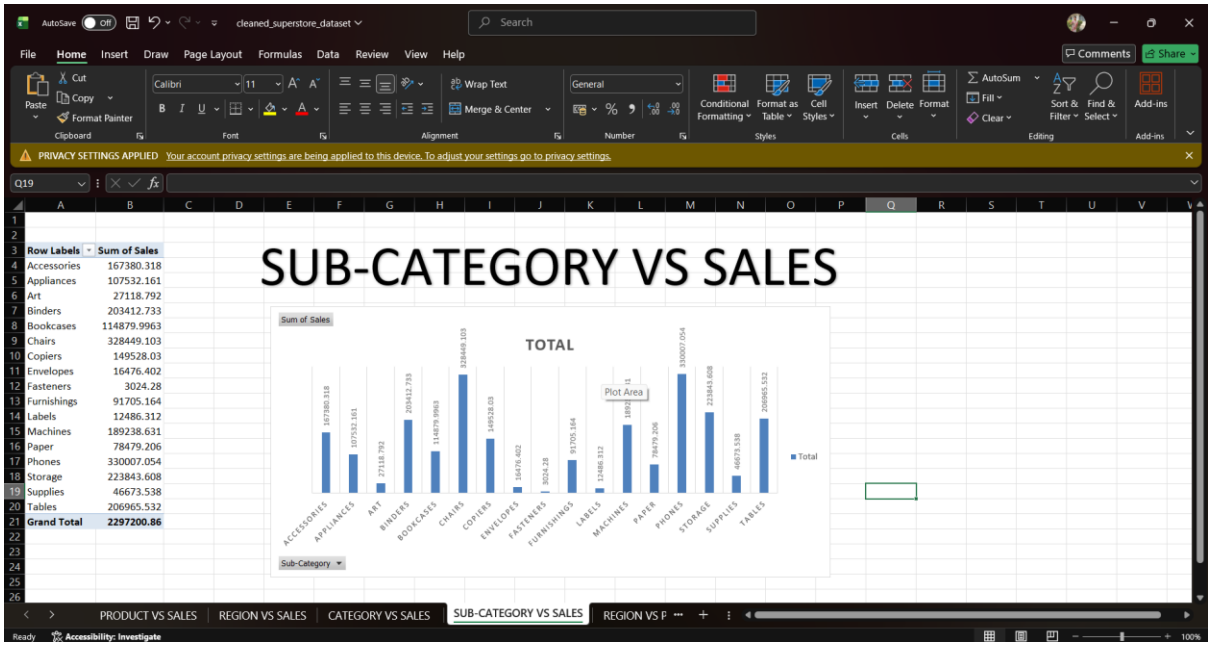


4. Sub-Category vs Sales

Chart Type: Bar Chart
Fields Used: Sub-Category (Axis), Sales (Values)

Observation:
Sales are concentrated in a few sub-categories, while others contribute less.

Business Insight:
Top sub-categories should be focused on for expansion and promotion.

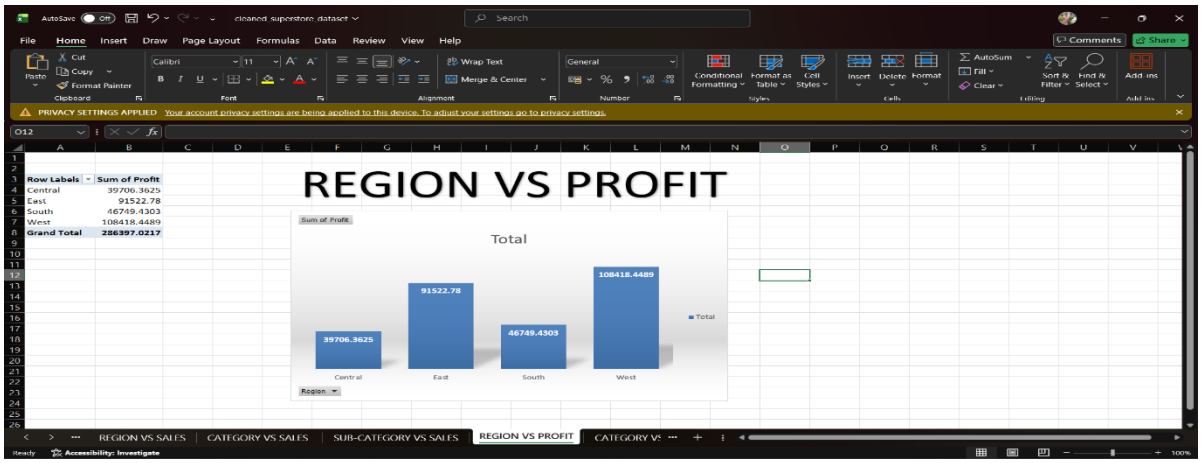


5. Region vs Profit

Chart Type: Column Chart
Fields Used: Region (Axis), Profit (Values)

Observation:
Some regions with high sales do not generate equally high profit.

Business Insight:
Profitability is affected by factors like discounts and costs. Businesses should optimize pricing and reduce unnecessary discounts.

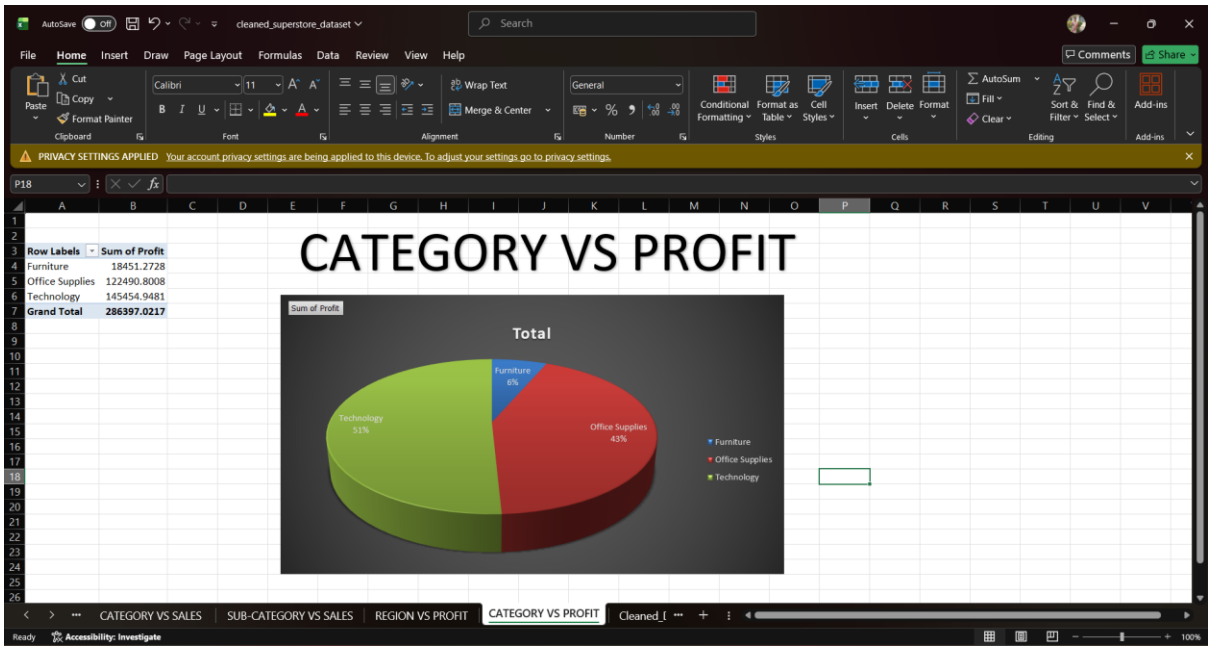


6. Category vs Profit

Chart Type: Pie Chart
Fields Used: Category (Axis), Profit (Values)

Observation:
Profit contribution varies across categories.

Business Insight:
Focusing on high-profit categories can improve overall business profitability.



Conclusion

Sales performance varies significantly across products, regions, and categories. Certain products and categories contribute more to total revenue, indicating strong customer demand. Some regions perform better than others, highlighting geographical differences in sales performance.

It is also observed that higher sales do not always result in higher profit, which indicates the impact of discounts and operational costs.

Overall, the business can improve by focusing on high-performing products and regions while optimizing strategies in low-performing areas to achieve better growth and profitability.
